SUBJECT INDEX

Adhesion
  heterocoagulation and
    convex surfaces 72
    plane surfaces 68-71
    strongly charged surfaces 71-72
Aerosol dynamics 273-358
Aerosol particles
  behavior in nonuniformly heated gaseous mixture 281-286
  distribution, gas molecules over velocities 281-282
  kinetic theory of gases and 281
  in neighborhood of CCl_4 drop in helium 285-286
  in neighborhood of growing or evaporating drop 284-285
  temperature and concentration gradients and 281
  velocity, directed 283-284
  diffusiophoresis of 277-280
  photophoresis of
    in laser-excited gas 352-358
  thermophoresis velocity of
    coefficient of thermal slip and 321-330
    horizontal method 323-327
    slit method 327-330
    theoretical methods 322-323, 329
  volatile
    thermophoresis of 302-306

Binary solutions
  molecular-surface forces in. See Molecular-surface forces, in binary solutions
Boundary layer of liquids
  kinetic phenomena in 138-151
    applications 150-151

MECHANICS RESEARCH COMMUNICATIONS

Editor: **BRUNO A. BOLEY,** *Department of Civil Engineering and Engineering Mechanics, Columbia University, New York, NY 10027, USA*

Mechanics Research Communications provides a fast means of communication and exchange of ideas among workers in mechanics, and offers an effective method of bringing new results quickly to the public. By doing so the journal establishes an informal vehicle for the discussion of ideas that may still be in the formative stages.
The journal encompasses the behaviour of fluids, solids, particles, continua, rigid bodies, mechanisms, systems and so forth, enabling the field of mechanics to be understood in a broad sense. It will include theoretical and experimental results, and fundamental and practical research.

PETROLEUM CHEMISTRY

(FORMERLY *PETROLEUM CHEMISTRY USSR*)

Editors: **Kh. M. MINACHEV,** *Zelinsky Institute of Organic Chemistry, Moscow, Russia* and **YE. I. BAGRII,** *A. V. Topchiyeva Institute of Petroleum Synthesis, Moscow, Russia*

There is a vast world literature on petroleum and its products and the contributions in the field emanating from Russia are of great importance. *Petroleum Chemistry* is a cover-to-cover translation of the Russian journal *Neftekhimiya*, dealing mainly with the chemistry of petroleum and its use as a base for the manufacture of industrial products. These papers are of value and interest to the researcher, the laboratory chemist and to all those dealing with the practical aspects of petroleum technology.
Petroleum Chemistry has a wide coverage and includes papers on the analysis, physical and chemical properties, and behaviour of individual petroleum constituents. Complementary papers cover the mechanism and application of a wide spectrum of processing reactions, featuring particularly catalytic oxidation and reduction.
Neftekhimiya is published six times a year.

ENGINEERING FRACTURE MECHANICS

AN INTERNATIONAL JOURNAL

Editor-in-Chief: **HAROLD LIEBOWITZ,** *AERDCO, PO Box 25736, Washington, DC 20007-8736, USA*

Engineering Fracture Mechanics publishes technical papers on research and advanced applications of fracture mechanics, including contributions in the areas of mechanics and materials science as related to fracture mechanics.
Topics regularly covered include: analysis of crack patterns, crack stress field analysis, experimental stress analysis methods, evaluations of materials, uses of fracture mechanics in studies of fatigue fracturing and stress corrosion cracking. Several pages of appropriate issues are devoted to a compendium of information, including a synthesis and utilization of significant research results. This information takes the form of reviews of books and papers published elsewhere, compilations of solutions (formulae) and other analytical results, and tables and curves of data and information from various sources. It provides a valuable data and reference source for the field.

A Selection of Papers
F. CHEN (Sweden), Weight function method for mixed-mode loading and mixed boundary conditions.
Y. L. XU & F. DELALE (USA), Stress intensity factors for an internal or edge crack in a circular elastic disk subjected to concentrated or distributed loads.
Y. W. KWON (USA), Analysis of crack closure in unidirectional composite plates subject to bending loads.
K. P. HERRMANN & A. NOE (Germany), Analysis of quasistatic and dynamic interface crack extension by the method of caustics.
H. CAI, J. T. EVANS & D. BOOMER (UK), Acoustic emission analysis of stable and unstable fracture in high strength aluminium alloys.
N. T. YOUNIS & J. NJOCK LIBII (USA), Determination of K_I and K_{II} by using a least-squares method with caustics.
W. C. KIM & C. K. H. DHARAN (USA), Facesheet debonding criteria for composite sandwich panels under in-plane compression.
R. S. DHALIWAL, H. S. SAXENA & J. G. ROKNE (Canada), Antiplanar shear problem for a crack between dissimilar nonhomogeneous isotropic elastic layers.

A Software Survey section is included in this journal.

EUROPEAN POLYMER JOURNAL

Founding Editors: **J. C. BEVINGTON,** *Department of Chemistry, University of Lancaster, Lancaster LA1 4YA, UK* and **M. STACEY, FRS,** *University of Birmingham, UK*

Editor-in-Chief: **J. V. DAWKINS,** *Department of Chemistry, The University, Loughborough, Leicestershire LE11 3TU, UK*

This journal acts as a medium for the exchange of research in the area of macromolecular substances, both synthetic and natural, and publishes results bearing on the physics or chemistry of polymers. Papers may fall either into the category of original papers dealing with substances of high molecular weight, or that of review articles covering the literature on topical aspects of polymer science and technology. The languages of the journal are English, French, German and Italian; for all papers an abstract is provided, and in the case of the latter three languages the abstract also appears in English translation.

A Selection of Papers

E. L. MADRUGA & J. J. MALFEITO (Spain), Effect of chain transfer agent and the reaction medium on the limiting conversion of methyl methacrylate free radical polymerization.

M. J. M. ABADIE & D. SAKKAS (France), Etude cinétique de la réticulation du polyester isophtalique insaturé par DSC—I. Etude isotherme.

YA JIANG YANG & J. B. F. N. ENGBERTS (Netherlands), Preparation and stability of polystyrene latexes using polysoaps as emulsifiers.

N. ALBEROLA, J. Y. CAVAILLE & J. PEREZ (France), Mechanical γ and β relaxations in polyethylene—I. Glass transitions of polyethylene.

J. R. ALLAN, B. R. CARSON, D. L. GERRARD & J. BIRNIE (UK), The performance of europium complexes as pigments for polystyrene.

L. D'ILARIO, A. MARTINELLI & A. PIOZZI (Italy), Poly(*p*-phenylene sulphide) single crystals: electrical properties of the pristine and doped polymer.

N. S. ALLEN, D. MALLON, I. SIDERIDOU, A. GREEN & A. TIMMS (UK) & **F. CATALINA** (Spain), Photochemistry and photopolymerization activity of a novel 3,4-dimethyl-2-(3-*N*,*N*-dimethylaminopropoxy)thioxanthone initiator.
